

The most advanced bucking bar you can buy!

Use what the pros use! Enjoy easier, better riveting with less fatigue. Reduce the risk of injury. Our MT-18F professional grade tungsten alloy bucking bars offer the maximum density available - more than twice as heavy as an identical bar made of steel. The small size and high density makes these bars versatile, able to fit in small areas. All bars have a full radius on all edges for safety and ease of handling.

Choose one of these standard bars or custom design your own at no additional charge!
